# Chapter 1

## Namespace Index

### 1.1 Namespace List

Here is a list of all namespaces with brief descriptions:

<a href="#">DF</a> . . . . .	<a href="#">7</a>
<a href="#">std</a> . . . . .	<a href="#">7</a>
<a href="#">std::shorts</a> Namespace for introducing shortnames . . . . .	<a href="#">7</a>

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

[DF::DataFrame](#)

[DataFrame](#) is class for parsing data in a given file with a give delimiter (default is comma ','). all data will be saved as string wich user can later covert to desired type . . . . .

[9](#)

## Chapter 3

# File Index

### 3.1 File List

Here is a list of all files with brief descriptions:

include/ <a href="#">ReadFiles.hpp</a>	
A class for reading files with different delimiters . . . . .	<a href="#">17</a>
src/ <a href="#">ReadFiles.cpp</a> . . . . .	<a href="#">19</a>

## Chapter 4

# Namespace Documentation

### 4.1 DF Namespace Reference

#### Classes

- class [DataFrame](#)

*[DataFrame](#) is class for parsing data in a given file with a give delimiter (default is comma ','). all data will be saved as string wich user can later covert to desired type.*

### 4.2 std Namespace Reference

#### Namespaces

- [shorts](#)

*namespace for introducing shortnames*

### 4.3 std::shorts Namespace Reference

namespace for introducing shortnames

#### Typedefs

- using [V\\_string](#) = vector< string >
- using [VV\\_string](#) = vector< [V\\_string](#) >
- using [Data](#) = unordered\_map< string, [V\\_string](#) >
- using [V\\_double](#) = vector< double >
- using [V\\_int](#) = vector< int >

#### 4.3.1 Detailed Description

namespace for introducing shortnames

## 4.3.2 Typedef Documentation

### 4.3.2.1 Data

```
using std::shorts::Data = typedef unordered_map<string, V_string>
```

Definition at line 33 of file ReadFiles.hpp.

### 4.3.2.2 V\_double

```
using std::shorts::V_double = typedef vector<double>
```

Definition at line 34 of file ReadFiles.hpp.

### 4.3.2.3 V\_int

```
using std::shorts::V_int = typedef vector<int>
```

Definition at line 35 of file ReadFiles.hpp.

### 4.3.2.4 V\_string

```
using std::shorts::V_string = typedef vector<string>
```

Definition at line 31 of file ReadFiles.hpp.

### 4.3.2.5 VV\_string

```
using std::shorts::VV_string = typedef vector<V_string>
```

Definition at line 32 of file ReadFiles.hpp.

## Chapter 5

# Class Documentation

### 5.1 DF::DataFrame Class Reference

[DataFrame](#) is class for parsing data in a given file with a give delimiter (default is comma ','). all data will be saved as string wich user can later covert to desired type.

```
#include <ReadFiles.hpp>
```

#### Public Member Functions

- int [get\\_n\\_rows](#) () const  
*Get the number of rows of a given data.*
- int [get\\_n\\_cols](#) () const  
*Get the number cols of a given data.*
- void [set\\_headers](#) (std::shorts::V\_string const &v\_hdrs)  
*Set the headers with user provided vector of strings.*
- std::shorts::V\_string [get\\_headers](#) () const  
*Get the headers.*
- std::shorts::V\_string [get\\_by\\_headers](#) () const
- [DataFrame copy](#) () const  
*to copy current data into new data frame*
- [DataFrame copy\\_by\\_hdrs](#) (std::shorts::V\_string const &v\_hdrs)  
*copy the requested data by provided headers name as vector of strings into a new data frame*
- void [remove\\_duplications](#) (std::string const &hdr)  
*get a given header and only keep the first occurance and remove the remaning rows*
- void [read\\_files](#) (std::string\_view path, char delim=',', bool is\_first\_col\_header=true, std::shorts::V\_string v\_↔  
hdrs={})  
*read files*
- void [read\\_files](#) (std::string\_view path, std::shorts::V\_int const &v\_cols\_length, bool is\_first\_col\_header=true,  
std::shorts::V\_string v\_hdrs={})
- void [head](#) (unsigned long long n=5)  
*print n first rows off all columns*

## Public Attributes

- [std::shorts::Data data](#)  
*saving data in an unrodered map*
- unsigned long long [n\\_rows](#)  
*number of rows*
- unsigned long long [n\\_cols](#)  
*number of columns*
- [std::shorts::V\\_string headers](#)  
*Header of data, whether is the first line or will be provided by user in case of user not providing header it would be string number start from one to number of columns of the data.*
- [std::unordered\\_map< int, int > mising\\_values](#)  
*an unorderd maps for missing values*

## Private Member Functions

- [std::shorts::V\\_string read\\_lines](#) (std::string\_view path)
- void [fill\\_data](#) (std::shorts::V\_string const &v\_strs, char delim=',', bool is\_first\_col\_header=true, [std::shorts::V\\_string](#) v\_hdrs={})
- void [fill\\_data](#) (std::shorts::V\_string const &v\_strs, [std::shorts::V\\_int](#) const &v\_cols\_length, bool is\_first\_col\_header=true, [std::shorts::V\\_string](#) v\_hdrs={})

### 5.1.1 Detailed Description

[DataFrame](#) is class for parsing data in a given file with a give delimiter (default is comma ','). all data will be saved as string wich user can later covert to desired type.

Definition at line 47 of file ReadFiles.hpp.

### 5.1.2 Member Function Documentation

#### 5.1.2.1 copy()

```
DataFrame DF::DataFrame::copy ( ) const
```

to copy current data into new data frame

Returns

[DataFrame](#) new data frame

#### 5.1.2.2 copy\_by\_hdrs()

```
DataFrame DF::DataFrame::copy_by_hdrs (
    std::shorts::V\_string const & v_hdrs )
```

copy the requested data by provided headers name as vector of strings into a new data frame

## Parameters

<code>v_hdrs</code>	
---------------------	--

## Returns

[DataFrame](#) new data frame

## 5.1.2.3 fill\_data() [1/2]

```
void DF::DataFrame::fill_data (
    std::shorts::V_string const & v_strs,
    char delim = ',',
    bool is_first_col_header = true,
    std::shorts::V_string v_hdrs = {} ) [private]
```

Definition at line 46 of file ReadFiles.cpp.

```
47 {
48     std::shorts::VV_string vv_strs;
49
50     for(auto const& line : lines)
51     {
52         std::istringstream iss(line);
53         std::string cell;
54         std::shorts::V_string v_str_tmp;
55
56         while(std::getline(iss, cell, delim))
57         {
58             cell.erase(std::remove(cell.begin(), cell.end(), '\\'), cell.end());
59             v_str_tmp.emplace_back(cell);
60         }
61         vv_strs.emplace_back(v_str_tmp);
62     }
63

103             exit(EXIT_FAILURE);
104         }
105
106         values.emplace_back(vv_strs[i_row][i_col]);
107
108         // check for the missig values
109         // missing values are empty string, NA, and NAN
110         if(vv_strs[i_row][i_col] == "" || vv_strs[i_row][i_col] == "NA" || vv_strs[i_row][i_col] ==
"NAN")
111         {
112             missing_values.insert({i_row, i_col});
113         }
114     }
115
116     data[headers[i_col]] = values;
117 }
118 }

```

#### 5.1.2.4 fill\_data() [2/2]

```

void DF::DataFrame::fill_data (
    std::shorts::V_string const & v_strs,
    std::shorts::V_int const & v_cols_length,
    bool is_first_col_header = true,
    std::shorts::V_string v_hdrs = {} ) [private]

```

#### 5.1.2.5 get\_by\_headers()

```
std::shorts::V_string DF::DataFrame::get_by_headers ( ) const
```

#### 5.1.2.6 get\_headers()

```
std::shorts::V_string DF::DataFrame::get_headers ( ) const
```

Get the headers.

Returns

`std::shorts::V_string` headers

### 5.1.2.7 get\_n\_cols()

```
int DF::DataFrame::get_n_cols ( ) const
```

Get the number cols of a given data.

#### Returns

int number of columns

Definition at line 10 of file ReadFiles.cpp.

```
11 {
12     return n_cols;
13 }
```

### 5.1.2.8 get\_n\_rows()

```
int DF::DataFrame::get_n_rows ( ) const
```

Get the number of rows of a given data.

#### Returns

int number of rows

Definition at line 15 of file ReadFiles.cpp.

```
16 {
17     return n_rows;
18 }
```

### 5.1.2.9 head()

```
void DF::DataFrame::head (
    unsigned long long n = 5 )
```

print n first rows off all columns

#### Parameters

<i>n</i>	
----------	--

Definition at line 126 of file ReadFiles.cpp.

```
127 {
128     if(n > n_rows)
129     {
130         fmt::println("Warning: number of columns requested to be printed is bigger than number of
available rows in data");
131         n = n_rows;
132     }
133
134     for(auto const& curr_hdr : headers)
```

```

135     {
136         fmt::print("{:10} ", curr_hdr);
137     }
138
139     std::cout << '\n';
140
141     for(unsigned long long i{0}; i < n; ++i)
142     {
143         for(auto const& curr_hdr : headers)
144         {
145             fmt::print("{:10} ", data[curr_hdr][i]);
146         }
147
148         std::cout << "\n";
149     }
150 }

```

### 5.1.2.10 read\_files() [1/2]

```

void DF::DataFrame::read_files (
    std::string_view path,
    char delim = ',',
    bool is_first_col_header = true,
    std::shorts::V_string v_hdrs = {} )

```

read files

#### Parameters

<i>path</i>	path to input file
<i>delim</i>	delimiter for parsing the input file
<i>is_first_col_header</i>	

Definition at line 120 of file ReadFiles.cpp.

```

121 {
122     auto v_strs = read_lines(path);
123     fill_data(v_strs, delim, is_first_col_header, v_hdrs);
124 }

```

### 5.1.2.11 read\_files() [2/2]

```

void DF::DataFrame::read_files (
    std::string_view path,
    std::shorts::V_int const & v_cols_length,
    bool is_first_col_header = true,
    std::shorts::V_string v_hdrs = {} )

```

#### Parameters

<i>path</i>	
<i>v_cols_length</i>	
<i>is_first_col_header</i>	

## 5.1.2.12 read\_lines()

```
std::shorts::V_string DF::DataFrame::read_lines (
    std::string_view path ) [private]
```

Definition at line 20 of file ReadFiles.cpp.

```
21 {
22     std::ifstream ifs(path.data());
23
24     if(ifs.fail())
25     {
26         fmt::println("Error: unable to read file {}.\\nPlease check your input.", path);
27         exit(EXIT_FAILURE);
28     }
29
30
31     std::string line;
32     std::shorts::V_string v_strs;
33
34
35     while(std::getline(ifs, line))
36     {
37         if(line.size() == 0) continue;
38         line.erase(std::remove(line.begin(), line.end(), '\\r'), line.end());
39         v_strs.emplace_back(line);
40     }
41
42     return v_strs;
43 }
```

## 5.1.2.13 remove\_duplications()

```
void DF::DataFrame::remove_duplications (
    std::string const & hdr )
```

get a given header and only keep the first occurrence and remove the remaining rows

## Parameters

<i>hdr</i>	header to check the duplication
------------	---------------------------------

## 5.1.2.14 set\_headers()

```
void DF::DataFrame::set_headers (
    std::shorts::V_string const & v_hdrs )
```

Set the headers with user provided vector of strings.

## Parameters

<i>v_hdrs</i>	provided headers from users
---------------	-----------------------------

### 5.1.3 Member Data Documentation

#### 5.1.3.1 data

`std::unordered_map<int, int> DF::DataFrame::data`

saving data in an unordered map

Definition at line 54 of file ReadFiles.hpp.

#### 5.1.3.2 headers

`std::vector<string> DF::DataFrame::headers`

Header of data, whether is the first line or will be provided by user in case of user not providing header it would be string number start from one to number of columns of the data.

Definition at line 73 of file ReadFiles.hpp.

#### 5.1.3.3 missing\_values

`std::unordered_map<int, int> DF::DataFrame::missing_values`

an unordered maps for missing values

Definition at line 79 of file ReadFiles.hpp.

#### 5.1.3.4 n\_cols

`unsigned long long DF::DataFrame::n_cols`

number of columns

Definition at line 66 of file ReadFiles.hpp.

#### 5.1.3.5 n\_rows

`unsigned long long DF::DataFrame::n_rows`

number of rows

Definition at line 60 of file ReadFiles.hpp.

The documentation for this class was generated from the following files:

- [include/ReadFiles.hpp](#)
- [src/ReadFiles.cpp](#)

## Chapter 6

# File Documentation

### 6.1 include/ReadFiles.hpp File Reference

A class for reading files with different delimiters.

```
#include <string>
#include <string_view>
#include <unordered_map>
#include <vector>
#include "fmt/core.h"
#include "fmt/format.h"
```

Include dependency graph for ReadFiles.hpp:

This graph shows which files directly or indirectly include this file:

## Classes

- class [DF::DataFrame](#)

[DataFrame](#) is class for parsing data in a given file with a give delimiter (default is comma ','). all data will be saved as string wich user can later covert to desired type.

## Namespaces

- [std](#)
- [std::shorts](#)  
*namespace for introducing shortnames*
